SUMMARY

Computer Science and Business Systems undergraduate at JSS Science and Technology University who builds applied AI systems across computer vision, NLP, speech, and fraud detection. Winner of the 8th Mile Hackathon at RV College of Engineering and finalist in the Vision 2047 National Hackathon. Proficient in Python, C, C++, Java, and JavaScript, with hands-on work in deep learning, transformer models, and full-stack web development. A collaborative team player with leadership experience.

EDUCATION

JSS Science and Technology University, Mysore, Karnataka — Sept 2023 – Present
Bachelor's in Computer Science and Business Systems

EXPERIENCE

Aragen Life Sciences, Bangalore, Karnataka — June 2026 – September 2026
Intern — HR Project Health Dashboard · *React*, *FastAPI*, *SQLite*, *Python*, *Pandas*

- Developed a full-stack HR analytics dashboard covering workforce KPIs, CTC analytics, manager performance, employee tenure, and attrition insights.
- Implemented employee CRUD operations with dynamic search and multi-filtering, so dashboards update automatically after every data change.
- Built an Excel/CSV import pipeline with data validation, duplicate detection, and preview before writing records to the database.
- Designed interactive charts and a responsive, enterprise-style UI to support workforce analysis and project health monitoring.

PROJECTS

UPI Fraud Detection System — Winner, 8th Mile Hackathon, RVCE · *Python*, *HTML*, *anomaly detection*

- Built a Python fraud detection system for UPI transactions that combines anomaly detection, context analysis, and rule-based risk scoring.
- Designed modular engines for fraud scoring, rules, graph analysis, and simulation to flag suspicious transaction patterns.
- Built a real-time dashboard (HTML + Python) that visualizes fraud scores and transaction insights.
- Structured a scalable, testable architecture and validated it on simulated transaction datasets.

Image Caption Generator · *Python*, *CNN*, *LSTM*, *attention mechanism*

- Built a deep learning model that writes descriptive captions for images, using a CNN for visual features and an LSTM for language generation.
- Added an attention mechanism, producing more human-like, object-aware captions than typical caption generators.
- Achieved an 85% BLEU score improvement over a baseline rule-based captioning approach.
- Optimized the inference pipeline to generate captions in under 1.2 seconds per image.

Video Conversation Chatbot · *Python*, *speech recognition*, *NLP*

- Built an AI chatbot that converses with users through video input, suited to virtual interviews, tutoring, and digital assistance.
- Integrated real-time speech recognition for spoken input, reaching 82% transcription accuracy even in noisy environments.
- Applied NLP to generate conversational responses in real time with under 300 ms latency.

Adverse Drug Reaction (ADR) Classifier · *Python*, *transformer embeddings*, *NLP*

- Built a machine learning model that classifies potential adverse drug reactions from user reviews and medical text to support pharmacovigilance.
- Raised ADR detection accuracy to 84% using transformer-based embeddings.
- Cut false positives by 20% through enhanced text preprocessing and domain-specific keyword extraction.
- Enabled faster ADR detection than traditional manual reporting.

ACHIEVEMENTS

- **Winner**, 8th Mile Hackathon, RV College of Engineering
- **Finalist**, Vision 2047 National Hackathon, RV College of Engineering (sponsored by FlairX Networks)
- **Top 10**, Hackathon at Manipal Institute of Technology, in collaboration with Codebasics
- **Top 15**, Hackathon at VVCE, in collaboration with SYMBIOT
- **Participant**, Hackathon by Hackculture on Metadomeai.com

TECHNICAL SKILLS

- **Languages:** Python, C, C++, Java, JavaScript

- **AI & ML:** Neural networks (CNN, LSTM, transformers), NLP, speech recognition, classification algorithms, pattern recognition
- **Web:** React.js, Node.js, FastAPI, HTML5, CSS3, Bootstrap, UI/UX design
- **Databases & Data:** SQL, MySQL, PostgreSQL, MongoDB, SQLite, Supabase, Pandas
- **Systems & Practices:** REST APIs, cloud platforms, distributed processing systems, software development lifecycle (SDLC)

VOLUNTEERING & INTERESTS

- **Volunteer Teacher, U&I NGO** — Teach English, Mathematics, and Science to underprivileged high school students.
- **Interests:** District-level chess player; table tennis, cricket, football, basketball, Formula 1.
